

Meet Korat

SUMMARY

AI Automation Engineer with experience building production-ready AI systems using LLMs, Voice AI, Workflow Automation, Cloud Infrastructure, and Product Engineering.

Over the past several months, I have designed and delivered AI-powered products including founder content automation platforms, educational video generators, AI lead qualification systems, AI paper evaluation platforms, and workflow automation solutions.

I enjoy taking complex business problems and transforming them into scalable AI-assisted systems that reduce manual work and improve operational efficiency.

EXPERIENCE

AI Automation Engineer

December 2025 – Present

AI-focused digital marketing company

Working at an AI-focused digital marketing company where I design, build, and maintain AI-powered internal products, workflow automation systems, and client-facing AI applications.

- Build production AI applications using modern LLM APIs.
- Design automation workflows for internal operations.
- Develop AI-powered content generation systems.
- Build AI lead qualification platforms.
- Create Voice AI applications.
- Develop AI-powered dashboards.
- Build media generation pipelines.
- Integrate third-party AI services.
- Build workflow orchestration systems.
- Deploy cloud-based AI applications.
- Work across frontend, backend, APIs, databases, and automation workflows.
- Collaborate with marketing, design, and product teams to deliver AI-powered solutions.

PROJECTS

Founder Video Automation Platform | Designed and built an AI-powered platform that converts founder opinions into complete publish-ready LinkedIn and Instagram videos.

- Telegram workflow
- AI script generation
- Voice cloning
- AI avatars
- B-roll generation
- Subtitle generation
- FFmpeg rendering
- Workflow orchestration
- Automated publishing pipeline
- OpenRouter
- ElevenLabs
- HeyGen
- Inngest
- FFmpeg
- Supabase
- Railway

Swiftee Educational Video Platform | Built a mascot-based educational video generation platform capable of automatically producing educational content using configurable storytelling presets.

- AI script generation
- Character animation
- Voiceover generation
- AI image generation
- Video rendering
- Subtitle generation
- Background music
- Workflow automation

AI Lead Qualification Platform | Designed and built an AI-powered lead qualification platform integrating chatbots, OTP verification, Voice AI, SIP calling, and AI-generated conversation insights.

- Lead qualification
- Phone verification
- OTP verification
- AI voice calling
- Conversation analytics
- Dashboard
- AI-generated summaries

AutoGrade | Built an AI-powered paper evaluation platform capable of automatically grading handwritten answer sheets using OCR and Vision AI.

- OCR
- Rubric evaluation
- Subject management
- PDF reports
- AI evaluation
- Vision models

Personalized Creative Distribution Platform | Built an automation system for generating and distributing personalized marketing creatives for hundreds of distributors using templates and WhatsApp automation.

TECHNICAL SKILLS

OpenAI

REST APIs

Background Jobs

Event-driven Workflows

ElevenLabs

SIP Trunking

Voice Cloning

Speech-to-Text

Text-to-Speech

Node.js
FastAPI (currently learning through production project)
Supabase
PostgreSQL
Firebase
Railway
Vercel
AWS (currently working with)
Amazon S3
Amazon Bedrock
AWS IAM
AWS Lambda
OpenSearch
Cloud Deployments
React
Next.js
Tailwind CSS
Lovable
FFmpeg
HeyGen
Subtitle Generation
AI Video Editing
Image Processing
AI Product Design
Workflow Architecture
Business Process Automation
Product Strategy
AI System Integration
Operational Efficiency
Technical Problem Solving
Rapid Prototyping

PROFESSIONAL IDENTITY

I build AI-powered operational systems that automate business processes, content generation, lead qualification, evaluation workflows, and internal operations.

My work combines AI models, workflow automation, cloud infrastructure, APIs, and product engineering to build production-ready systems that solve real business problems.

WORKFLOW AUTOMATION EXPERIENCE

Built production automation systems including: - Founder content pipelines - Educational video automation - WhatsApp automation - AI media pipelines - Google Slides automation - Bulk content generation - Voice AI workflows - Internal AI tools - Marketing automation - Dashboard automation

AUTOMATION GALLERY

Additional production workflows include: - 650+ Song Generation Pipeline - 600+ Google Slides Automation - Lion Kitchen Daily Panchang Automation - AI Image Generation Pipelines - AI Video Generation Pipelines - Content

Repurposing Workflows - Internal Business Automation Systems - Marketing Asset Generation - WhatsApp Distribution Automation - Dashboard Automation

WHAT I BRING

I do not simply integrate AI APIs.

I design complete AI-powered operational systems that combine cloud infrastructure, workflow orchestration, automation, media generation, and product thinking to solve real business problems.

My focus is building systems that businesses can reliably use in production rather than creating isolated AI demonstrations.

CURRENT LEARNING

Actively working with: - Amazon Web Services (AWS) - Amazon Bedrock - FastAPI - Serverless Architectures - IAM - Lambda - OpenSearch - Vector Search - Data Engineering Concepts - AI Infrastructure - Cloud-based AI Systems

CAREER GOAL

To join an AI-first product company or startup as an AI Automation Engineer or Applied AI Systems Engineer, where I can build scalable AI products, learn from experienced engineers, and contribute to production-grade AI systems while growing into a senior engineering role.
