SUMMARY

Founding AI Automation Engineer who builds AI agents and automations that do recurring work on their own: scheduled and durable pipelines, tool integrations (WhatsApp, CRMs, Google Workspace, voice), memory, and a human approval step where mistakes are costly. In 11 months I've shipped production AI systems for a government edtech platform, a finance AI product and multiple brands, and I run client delivery myself, from requirement calls to launch and monitoring.

EXPERIENCE

Founding AI Automation Engineer, Because

Dec 2025 to Present · Ahmedabad

First AI engineer at a leading Gujarat brand and marketing agency whose clients include Gujarat Titans and Ankur Oil. Built the agency's AI automation practice from zero.

- **ConveGenius (SwiftChat): WhatsApp publishing system for government education.** ConveGenius runs AI education systems for state governments, reaching 100M+ students (its Vidya Samiksha Kendra model was first piloted in Gujarat). Built CG Sanchar: generate creative → AI caption → human review → schedule to WhatsApp channels. **~170 creatives** shipped across **9 state channels**; per-state access control; zero shared cloud credentials. ConveGenius then moved it into its own workspace for its teams. Case study
- **B-One: the agency's internal AI operating system (core engineer).** Agent workflows run as durable Inngest jobs with human approval checkpoints, Composio connectors to client tools, and OpenRouter routing with a primary plus 2 fallback models per workflow. Own model routing, per-run cost tracking, infrastructure costs and production database releases.
- **Foresight: finance AI platform (team build).** Turns spreadsheet-bound management reporting into plain-English answers traceable to source rows; showcased at a CFO Symposium in Perth. Contributed to the AWS medallion data lake, Bedrock RAG and the data-privacy and AI-usage policy. Case study
- **AI lead and admissions engine for schools and brands.** Knowledge-base chat agent with Mem0 memory replaces ad lead forms; OTP verification (DLT + MSG91) and CRM sync; an ElevenLabs voice agent on SIP calls every lead; WhatsApp follow-up; analytics dashboard with summary, sentiment and next step per call. **Live for 2 clients** (NAMTECH, Annalaxmi). Case study
- **Personalised jingle pipeline** (n8n, OpenRouter, Lyria): **650+ bilingual songs** for 650+ stores, unattended. Schema-validated agent output, model fallback, and an auto-rewrite agent when a safety filter blocks a track.
- **More in production:** AutoGrade vision-LLM paper grading (**~2 min per paper, ~90% less grading time**) · Swiftee, topic to 60-second Hindi educational short · 600+ AI-rendered slides into Google Slides · daily mascot video with zero manual touch · 500+ distributor creatives over WhatsApp API in 2 clicks.

SKILLS

Agents & LLMs	Claude, OpenAI, Gemini, OpenRouter · tool calling, structured outputs, multi-agent handoffs, Mem0 memory, RAG (AWS Bedrock), vision LLMs
Orchestration	Inngest (durable workflows), n8n, webhooks, scheduled jobs, retries, model fallbacks, human-in-the-loop approvals
Integrations	Composio, WhatsApp Business API, ElevenLabs, SIP (Vobiz), GoHighLevel, HeyGen, FFmpeg, Google Workspace APIs, MSG91
Backend & cloud	TypeScript / Node.js, FastAPI, Supabase / PostgreSQL, AWS (Lambda, S3, CloudFront, Bedrock, IAM)
Frontend	React, Next.js, Tailwind, Lovable

EDUCATION

B.E. Computer Engineering, Gujarat Technological University · CGPA 8.22 — Aug 2022 to Jul 2026

ADDITIONAL

36-hour DAIICT hackathon: built a real-time collaborative coding platform · Languages: English, Hindi, Gujarati
